

ASSIGNMENT – 6 ADVANCED SOFTWARE ENGINEERING

SERVLETS MASHUP

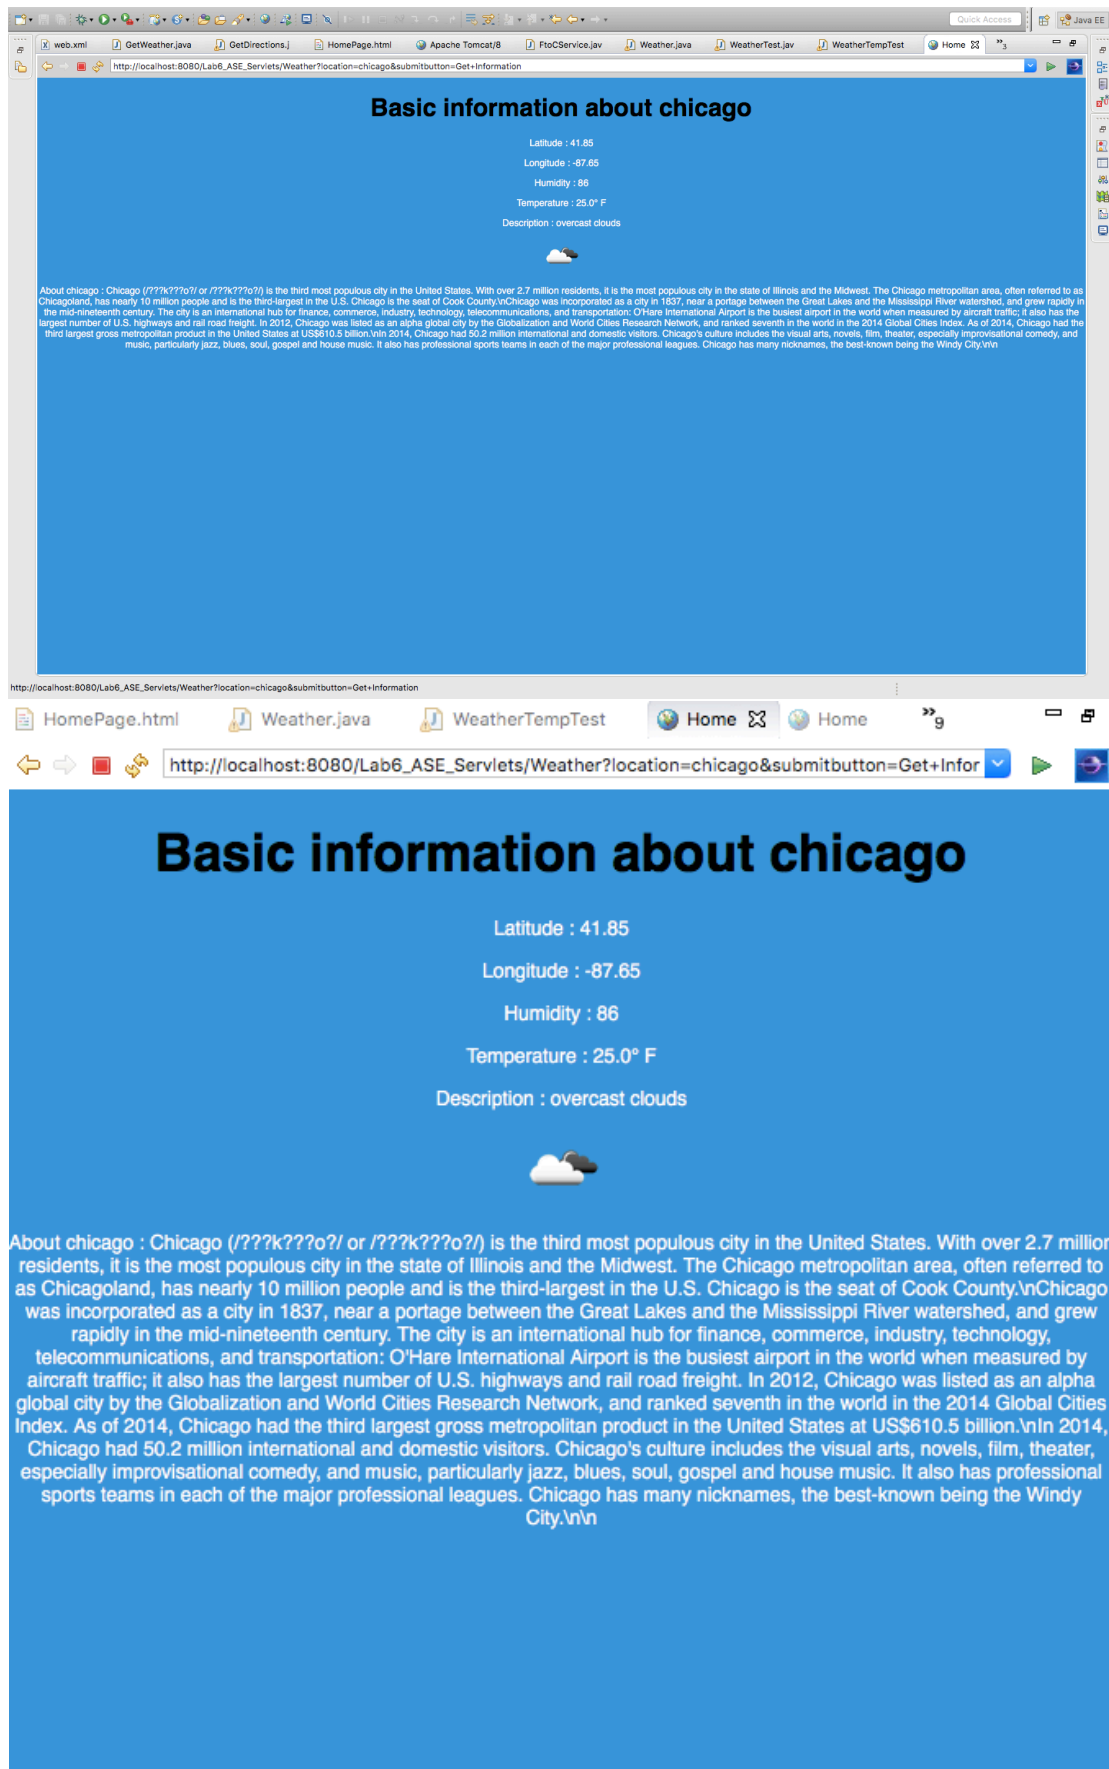

- This application intends to give the basic information of a city entered by the user.
- It makes use of **Openweathermap** API to give the weather details, **Wikipedia** API to give the information about the city.
- This application consists of two pages:
 1. Enter the name of a city to get the basic information.
 2. Displays the information about the city.
- Junit Testing is done on both failure and success cases.

Screenshots:

Screen 1 – Enter the name of a city to get the basic information.

Screen 2 – Gives the information about the city making use of Openweathermap and Wikipedia API

The screenshot shows a web browser window with the address bar displaying `http://localhost:8080/Lab6_ASE_Servlets/Weather?location=chicago&submitButton=Get+Information`. The browser's tab bar shows several tabs, including `web.xml`, `GetWeather.java`, `GetDirections.j`, `HomePage.html`, `Apache Tomcat/8`, `FtoCService.jav`, `Weather.java`, `WeatherTest.jav`, and `WeatherTempTest`. The main content area of the browser displays a web page with a blue background and the title **Basic information about chicago**. The page contains the following information:

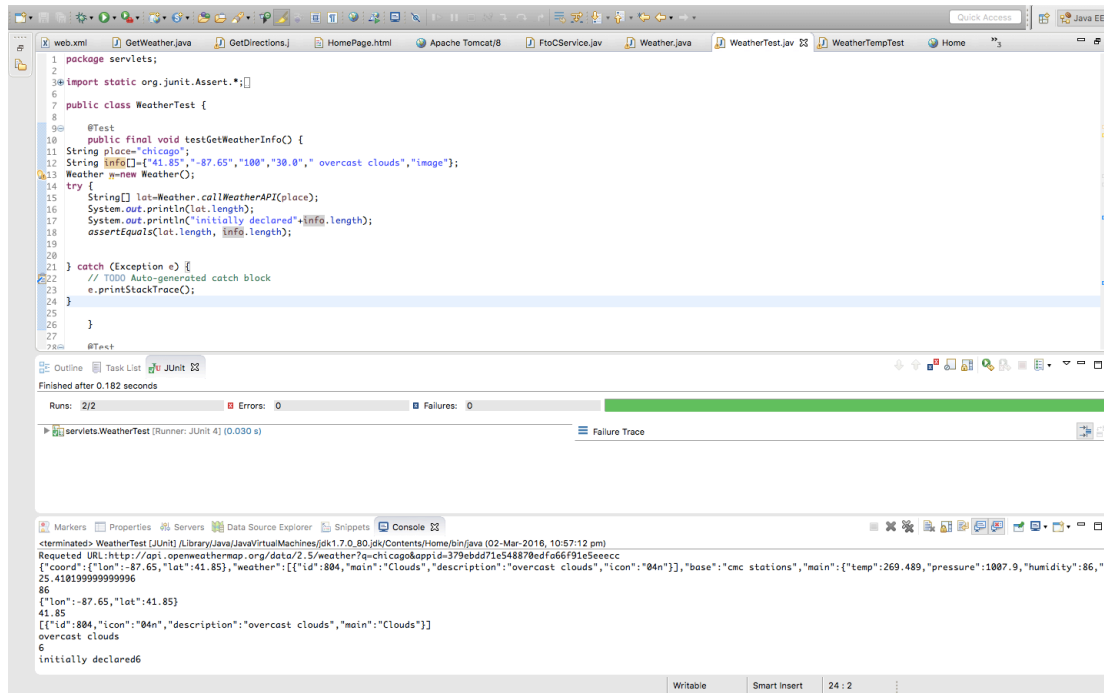

Latitude : 41.85
Longitude : -87.65
Humidity : 86
Temperature : 25.0° F
Description : overcast clouds

Below the weather information is a small icon of a cloud with rain. Underneath is a paragraph of text about Chicago, which is a mix of English and placeholder text (e.g., `/???k???o?/` or `/???k???o?/`).

About chicago : Chicago (`/???k???o?/` or `/???k???o?/`) is the third most populous city in the United States. With over 2.7 million residents, it is the most populous city in the state of Illinois and the Midwest. The Chicago metropolitan area, often referred to as Chicagoland, has nearly 10 million people and is the third-largest in the U.S. Chicago is the seat of Cook County. Chicago was incorporated as a city in 1837, near a portage between the Great Lakes and the Mississippi River watershed, and grew rapidly in the mid-nineteenth century. The city is an international hub for finance, commerce, industry, technology, telecommunications, and transportation: O'Hare International Airport is the busiest airport in the world when measured by aircraft traffic; it also has the largest number of U.S. highways and rail road freight. In 2012, Chicago was listed as an alpha global city by the Globalization and World Cities Research Network, and ranked seventh in the world in the 2014 Global Cities Index. As of 2014, Chicago had the third largest gross metropolitan product in the United States at US\$610.5 billion. In 2014, Chicago had 50.2 million international and domestic visitors. Chicago's culture includes the visual arts, novels, film, theater, especially improvisational comedy, and music, particularly jazz, blues, soul, gospel and house music. It also has professional sports teams in each of the major professional leagues. Chicago has many nicknames, the best-known being the Windy City.

JUnit Testing :

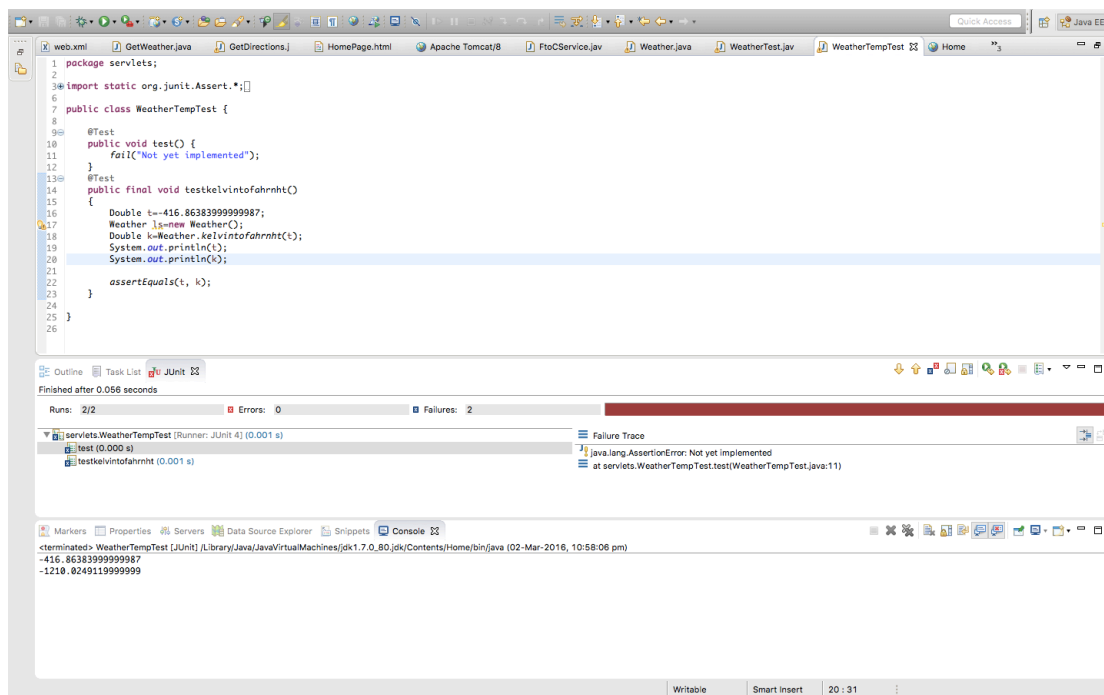

Success:

The screenshot shows an IDE with the following components:

- Editor:** Contains the code for `WeatherTest.java`. The code imports `org.junit.Assert.*` and defines a test method `testGetWeatherInfo()` that uses `assertEquals` to verify the length of the weather information string.
- JUnit Runner:** Shows the test results. The test `serviets.WeatherTest` passed successfully. The progress bar is green, indicating success. The status bar shows "Runs: 2/2", "Errors: 0", and "Failures: 0".
- Console:** Displays the output of the test run, including the URL of the weather API and the JSON response.

Failure:

The screenshot shows an IDE with the following components:

- Editor:** Contains the code for `WeatherTempTest.java`. The code defines a test method `test()` that uses `fail()` to indicate a failure.
- JUnit Runner:** Shows the test results. The test `serviets.WeatherTempTest` failed. The progress bar is red, indicating failure. The status bar shows "Runs: 2/2", "Errors: 0", and "Failures: 2".
- Console:** Displays the output of the test run, including the URL of the weather API and the JSON response.
